

IASIS Micro-Current Neurofeedback Introduction

- ▶ Hi, i'm _____, of Iasis Technologies. Our Micro-Current Neurofeedback features low intensity pulses using transcranial electrical stimulation.
- ▶ IASIS MCN has a published pilot study on PTSD & TBI from UC San Diego in brain injury journal; and is in year two of a federally funded double-blind study with UCSD, also for PTSD & TBI. Two additional studies are underway with the University of Texas on Alzheimer's, & anxiety & depression.
- ▶ IASIS MCN stimulates healthy delta brain waves which finds abnormal delta related to brain trauma, allowing metabolic clearance; The release of excess alpha & beta-amyloid proteins. Finally, a safe, non-invasive solution to help the brain detox.
- ▶ According to Dr. Ryan McWhorter, the average human adult can detox up to 9 lbs of metabolic waste in one year by stimulating the lymphatic system; Reporting diminished pain, improved memory & cognitive function for peak performance.
- ▶ It is easily integrated into one's practice after only a two day training.
- ▶ Research has shown:
 - ▷ 53% reduction in post concussive symptoms; &
 - ▷ 54% reduction in abnormal brain waves
- ▶ Patients in sympathetic freeze - often immediately report significant reduction in anxiety, reactivity, impulsivity & diminished insomnia in 1-3 sessions.
- ▶ Thank you very much!!!
