

Intro to IASIS Micro Current Neurofeedback

This is a non medical treatment, thus no filing medical records or paper trail to determine your condition.

MCN utilizes a frequency similar to the brain delta waves that occur when you are in deep sleep. The out put of the MCN will not be felt when transmitting. The purpose is to detox the brain with Delta waves, this is similar to de-fragging a computer of corrupted files.

The process is set to treat 2 times a week for a month, then 1 a week for 2 months. A total of 90 days. The treatments are cumulative, that is a reason to stay on schedule. If you are unable to dedicate the time then the treatments could take much longer.

24 hours after each treatment you send a report on your results of the past treatment. The more data collected will illustrate how effective the treatment is helping. Your symptoms need to be converted to number as much as possible.

Prior to treatment insure you are hydrated, the brain is 70% fluid and can cause problems if you are dehydrated. No makeup on forehead and no hair additives before treatment (hairspray, gel) The contacts require good conductivity to work best.

Other people in your family can assist with documenting your progress, ask for their inputs.

Initial session is an hour, following sessions decrease in time but it is important to show up for treatment as scheduled to keep from causing a delay to others, your treatment time may be reduced if unable to meet the start time. You should sense some change in the first three sessions. The protocols change at each session so tract your symptoms, report at 24 hours and be as honest as you can when questions are asked during treatments.

Sincerely,

Dudley Chewing EdD, LPC-S, LMFT, ICP
