

## ITS for you

Integrative Treatment Services (ITS) for the listed conditions, ITS will measure the EMF energy in ones body/central nervous system.

Too much EMF is detrimental to sleep, which interferes with sleep and restoration of the body and brain. Cell phones, WiFi, Microwaves, and office equipment at work can load your body EMF beyond what is normal. Our CNS transmits in frequencies to perform it's functions. The heart requires a certain rhythm to circulate blood in the body. Too much EMF can interfere in this process.

ITS uses an EMF instrument to assess the body's accumulated EMF and will refer you to medical professionals for corrections or awareness by them in any medical/mental (depression, anger, anxiety) condition you may have.

ITS will measure the status of your brains health for normal mental functioning and assist in measurement of TBI and concussion problems. This can be used prior to medical treatment and as a follow up from procedure/interventions used by other offices to determine wellness.

ITS can treat the following to help diminish symptoms caused by the following:

PTSD	MEMORY PROBLEMS
TBI	PERFORMANCE ENHANCEMENT
MIGRAINES	ANXIETY, ANGER, AGGRESSION
PAIN	CHILDHOOD TRAUMA.

ITS's Focus is assisting first responders; emergency room staff, law enforcement, fire, and military (active, retired, Guard and Reserve).

IASIS microcurrent feedback has been beneficial in reducing symptoms in other problems: fibromyalgia, Autism, ADD/ADHD, Lyme disease recovery and other neurological problems.

ITS will assess your condition prior to care of any kind, then assess son health post treatment. These assessments are helpful to determine football head injuries, concussions after they occur and before returning to play.

ITS 4 U: Brain Mental Assessment , EMF Assessment, Mental Health care pre and post treatment assessment on how other practitioners assisted your recovery.

Some mental health providers are not up to date on how trauma or PTSD should be treated. There are several different forms of trauma and some Interventions are incorrectly applied. I've had clients that have spent years in treatment that was of no value. Technology is available and can assist, research is vital. ITS is using new technology and measurement to validate services render by our office and other offices.
